Supported

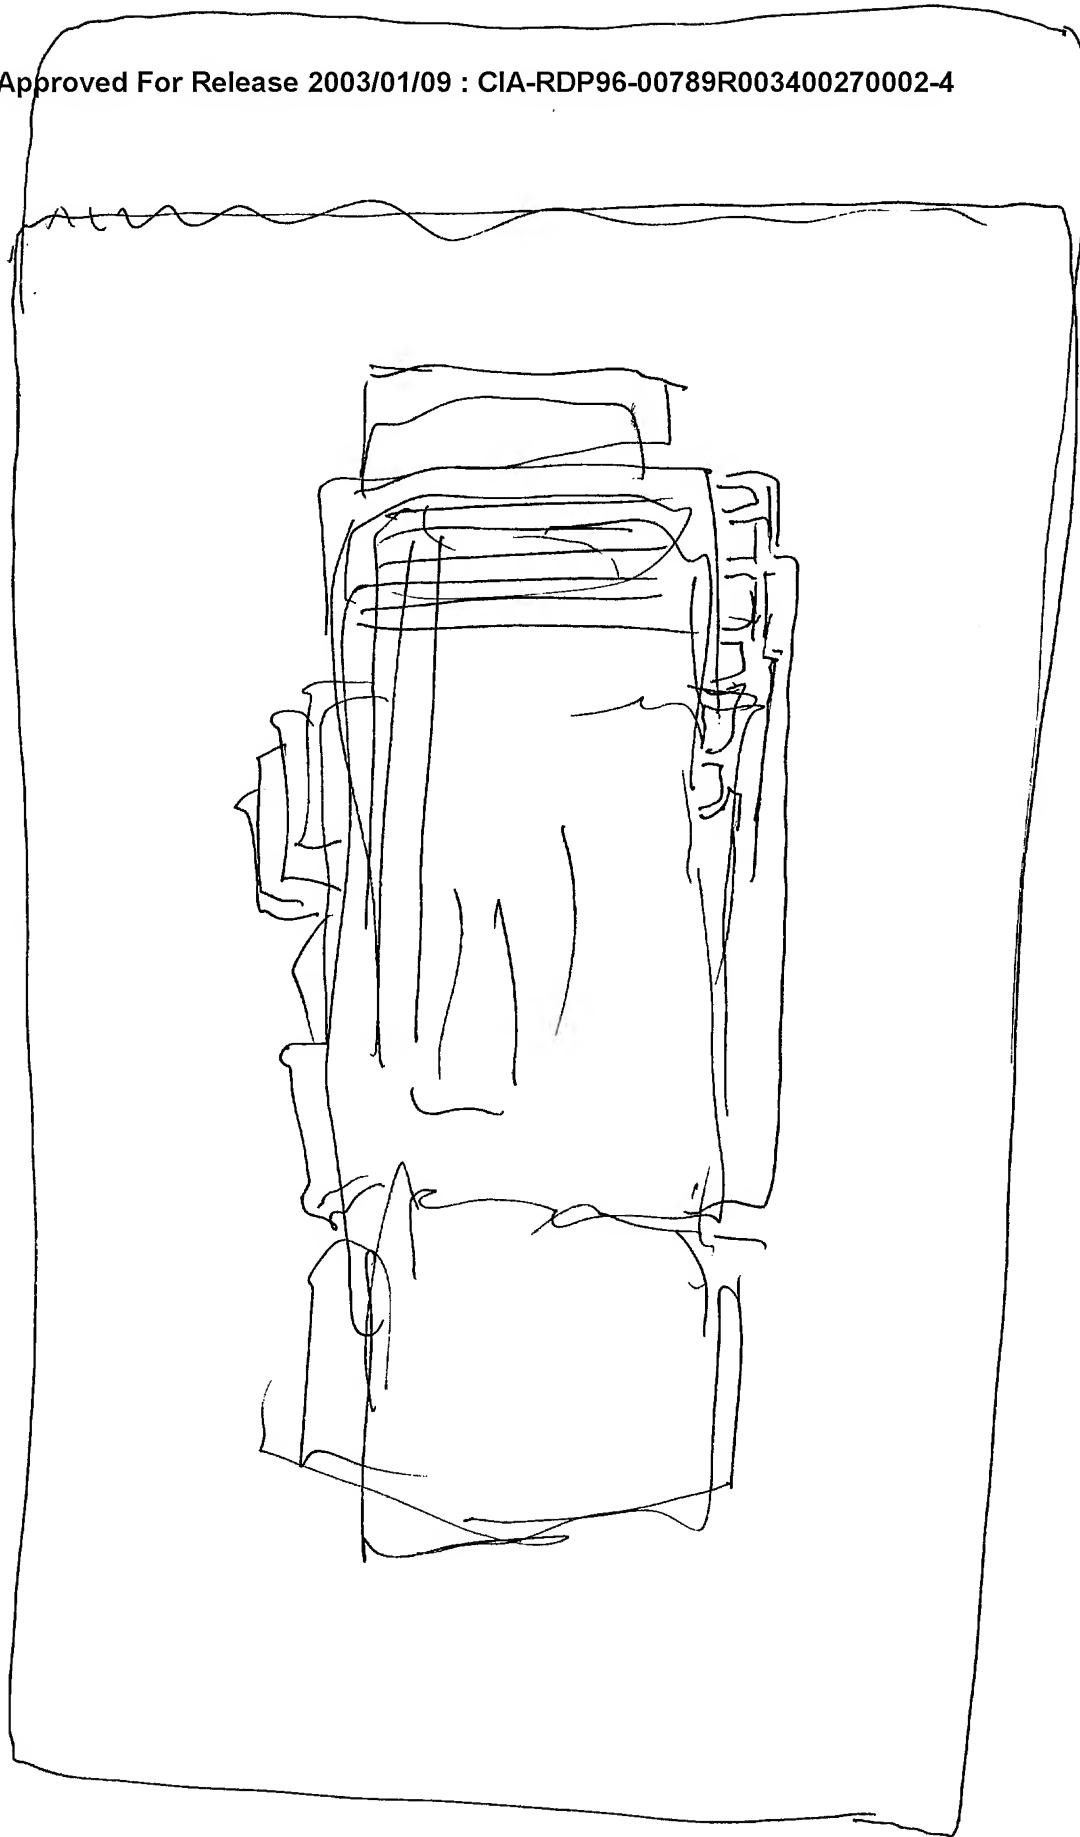

Set 1/2 "like" a closed recirculating environment - add even
interior a break in the "seal" would be catastrophic
for the operation involves & also physically
dangerous for anyone in immediate vicinity

Permit
use of
parts of
a greenhouse

light
bright

Set 1/2 Space to walk projectiles around over
area a end of equipment for complete 360°
observation & adjustment of systems &

An

Ab

Sub's portion "like" engine or carburetor manifold -
shape

input

Sub amount of material introduced control speed
+ vitality of process

Anch like nuclear reactor + Radioactive fuel
introduction except this stuff isn't solid

As Bk

diffs

Substance involved is somewhat corrosive
or unpleasant/unfriendly to unprotected
handling. Noxious. Dangerous. Eats out
conduit linings - isotopes/corrosives
At least, sub channels get corroded or
weakened works conduit segments can be replaced

What happens here is we only. Doesn't depend
on regular outgo or income exterior to
shelter. It's "like" a test to see if it
really works & if so other similar, though
refined + "toughened" facilities - plantage - will be

put at varying scales thru-out countries, seas
& this here Soviet territory - at any rate denied

A2 E2 I AD A/S

Sel's externally, not hardly noisy nor any major heat/light/noise signatures to indicate process being performed inside ~~opposite~~ Anlage.

May
have to
do w/
radiation
"like" an
almost fixed
delegatable
nuclear power
generator

54½ lifespan myself think - previous ("life" 1½-2 yrs.)
people who carry large metal component arms &
constant interior Anlage + expand shelter base walls
simultaneously - some parts too big to bring thru
door & must be put in place before shelter completely
overload. Testing "low-load" runs. Sub-element checks
out over period. "Full runs" going now. Eventually
contaminated as "research" station for possible future applications

fusion
plant.

56½ substances involved are recyclable up to a point

Approved For Release 2003/01/09 : CIA-RDP96-00789R003400270002-4

14007

Sel's "Like" there's two different systems that are not in any way physically connected but must be in complete juxtaposition to one another - in direct mutual contact & adjacent to each other because they depend on each other to accomplish desired result. But they may not intermix without completely negating project.
The one fully and the other have some sort of measurable significant input & @ other without actually being in direct contact.
